

Repel-Ink™

CLEANER

Ink-Repellent Solution for PerfectBlack® Jackets

Directions for use:

Always follow safety practices when operating a press to rotate the cylinders for cleaning. Wear gloves and eye protection. Shake the bottle well, and then apply 1-2 ounces of cleaning liquid onto an absorbent, strong, lint-free cloth. Apply slight pressure with the moistened cloth against the Impression cylinder's PerfectBlack® steel jacket surface and rub the surface from left to right until the exposed surface is clean; carefully rotate the impression cylinder to another dirty area, and repeat cleaning. Follow this procedure until the entire surface of the PerfectBlack® Steel Jacket is clean. Repel-Ink Cleaner removes old ink and coats the surface of the PerfectBlack® Steel Impression cylinder jacket with an ink repellent layer that will dramatically aid the printing of really tough perfecting jobs. Re-apply as needed.
